

Objection to Lightsquared use of GPS adjacent spectrum. I strongly object to the granting of spectrum adjacent to the GPS signal frequencies to Lightsquared for the purpose of establishing their network. The recent report and follow-up comments by industry experts has persuaded me that there is no feasible solution to the problem of GPS interference by Lightsquared's intended use of the spectrum. Further pursuit of this approach merely prolongs and increases the expense for the GPS industry and its many many users and Lightsquared.
